GT 5.2.4 C Common Libraries: Developer's Guide
The C Common Libraries provide an abstraction layer for data types, libc system calls, and data structures used throughout the Globus Toolkit and useful for applications that use the Globus Toolkit.

1.1. Tested Platforms ........................................................................................................................................ 1
Chapter 1. Before you begin

1. Feature summary

- Globus Callback - Portable event handling layer for signal handling and periodic and one-shot events in a single- more multi-threaded environment.

- Globus Error - An abstraction for providing context-specific information in error response in C.

- Portable Threading API for POSIX and Windows

- URL String Parser

- Configuration handlers for command-line, environment-variable, and configuration file based application configuration.

2. Tested platforms

The C common libraries have been tested on the following platforms

Table 1.1. Tested Platforms

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Distribution</th>
<th>Version(s)</th>
<th>Architecture(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Linux</td>
<td>CentOS</td>
<td>4</td>
<td>x86_64</td>
</tr>
<tr>
<td></td>
<td>CentOS</td>
<td>5</td>
<td>i386, x86_64</td>
</tr>
<tr>
<td></td>
<td>Fedora</td>
<td>16, 17</td>
<td>i386, x86_64</td>
</tr>
<tr>
<td></td>
<td>Red Hat Enterprise Linux</td>
<td>5, 6</td>
<td>i386, x86_64</td>
</tr>
<tr>
<td></td>
<td>Scientific Linux</td>
<td>5, 6</td>
<td>i386, x86_64</td>
</tr>
<tr>
<td></td>
<td>Debian</td>
<td>6, 7 (testing)</td>
<td>i386, amd64</td>
</tr>
<tr>
<td></td>
<td>Ubuntu</td>
<td>10.04 LTS, 11.10, 12.04 LTS, 12.10</td>
<td>i386, amd64</td>
</tr>
<tr>
<td></td>
<td>Mac OS X</td>
<td>10.8 (Mountain Lion)</td>
<td>x86_64</td>
</tr>
<tr>
<td></td>
<td>Solaris</td>
<td>11</td>
<td>x86_64</td>
</tr>
</tbody>
</table>

3. Backward compatibility summary

API changes since GT version 5.2.3

None.

All of the GT 3.2 API is still functional in GT 5.2.4.

4. Technology dependencies

C Common Libraries only depend on the globus_core module.
5. Security Considerations for C Common Libraries

There are no security considerations for the C Common Libraries.
Chapter 2. Usage scenarios

Common libraries will need to be used if virtually any other toolkit component is used, since many data types are abstract and require the C common libraries to manipulate.
Chapter 3. Architecture and design overview

Not available at this time.
Chapter 4. APIs

1. Component API

See the C API pages\(^1\) for other API documentation on globus\_common.

\(^1\) http://www.globus.org/api/c-globus-5.2.4/
Chapter 5. Environment variable interface

1. Environment variables for C Common Libraries

GLOBUS_HOSTNAME  Set this variable to the fully qualified name of the local machine’s hostname.

GLOBUS_DOMAIN_NAME  Set this variable to the domain name to be used to qualify the local machine's hostname.

GLOBUS_ERROR_OUTPUT  Set this variable to 1 to cause Globus libraries to display error information to stderr.

GLOBUS_ERROR_VERBOSE  Set this variable to 1 to enable verbose error messages.

GLOBUS_I18N  Set this variable to 1 to attempt to use localized messages. (Currently not working)

GLOBUS_LOCATION  Set this variable to the path where the Globus Toolkit is installed, so that Globus tools can find libraries and data files. This is only needed if the Globus Toolkit was built with the source installer.

GLOBUS_THREAD_MODEL  Set to the name of a thread model to control the operation of the Globus event driver. Valid values are (depending on the platform) none for non-threaded operation (the default), pthread for POSIX threads, or windows for Windows threads.
Chapter 6. Debugging

General C debugging techniques apply when developing with the C common libraries.
Chapter 7. Troubleshooting

There are no specific troubleshooting techniques for the C common libraries.
Chapter 8. Related Documentation

See the C API pages\textsuperscript{1} for more information about this component.
